Prince William Motor Inn, Melville, SK ........................ 306-728-4546
Ituna Motor Inn, Ituna, SK............................................. 306-795-2244

• Enrolled on CAP (Canadian Angus Performance).
• All cattle ROP tested (a firm belief for producing superior beef cattle
  at Crescent Creek).
• All bulls will be ultrasound scanned for carcass data under the CUP
  system. CUP data will be available prior to the sale on our website
  and on sale day.
• All Crescent Creek Sale Cattle are fully guaranteed for both
  soundness and fertility.
• Bulls will be Semen Tested as well as have Scrotal Measurements
  (available Sale Day).
• Bulls have been rated (in our opinion) on calving ease ability
  1* indicates - Recommended on cows
  3 *** indicates - Moderate birth
  5 ***** indicates - Calving Ease elite
• Delivery can be arranged with Crescent Creek.
• Crescent Creek’s breeding program has developed many 1/2 and
  3/4 brothers “Consistency Counts”.
• Actual sale weights will be available Sale Day.
• Crescent Creek will keep bulls until May 1. Insurance on sale bulls
  that are left is encouraged by the buyer.
• Crescent Creek reserves the right to draw semen on any bull.
• Volume Discount - 3% on 3 bulls, 4% on 4 bulls, 5% on 5 bulls, 6%
  on 6 bulls, 7% on 7 bulls, 8% on 8 bulls, 9% on 9 bulls and 10%
  on 10 or more bulls.

Once again, welcome to the 13th edition of the Crescent Creek Bull & Female Sale. We would like to thank all of you who have chosen our program in the past and welcome anyone who is considering it for the first time. We are very excited about this year’s offering - strong offspring of our own walking bulls, bred and raised here at Crescent Creek, along with some older proven and valued genetics in Fortune 425C and Dynasty bred cattle. This offering is truly an out cross alternative.

Come to our sale and you will again see a set of fresh, athletic, free moving bulls. These fellows are fed for longevity and breeding excellence. They have been hand fed to gain approximately 3 lbs per day. These bulls where never “pushed” at any time. The females are an elite group, representing proven cow families at Crescent Creek. Large groups of ½ sibs that make it easy to assemble a nice fresh, new set of genetics. With the coming of a new year the cattle market seems poised for new highs and enthusiasm. It seems we have turned that corner we have all been looking for. Now more than ever good sire selection will pay dividends more so than at any other time. A quote from a recent article I read has never been truer “Purchases of herd bulls should not be considered a short time expense but rather as a long term investment”. Bang on for any sector of the industry.

2011 brings some changes at Crescent Creek, one of them being the new sale date. Be sure to mark down SATURDAY, APRIL 2, 2011 as the day you want to be at Crescent Creek. Everything else here remains constant. We have an excellent set of cattle, hospitality and after sale service second to none. Also 2011 brings an end to an exciting era of breeding Red Angus at Crescent Creek. Due to challenges managing our workload and a never ending exodus of our family workforce, August 14, 2011 will mark the sale of our complete Red Angus herd. If you are thinking of expanding or entering the Red Angus industry, this may be the opportunity you have been waiting for.

Once again a huge THANK YOU to everyone who helps put this special event on. You know who you are and we are eternally grateful for your help and friendship. We invite everyone to stop in anytime to view this exciting offering.

The Olynyk's

Welcome to Crescent Creek where again hospitality and fellowship is second to none. Better yet would be the fact that the Olynyk family has developed one of the most recognized and appreciated Angus herds in Canada. The strength in the well bred cow herd continues to allow for a great offering of sale cattle.

The bulls are super sound, consistent in type and certainly unique enough to be a genetic alternative for not only first time breeders but also for the many repeat customers that Crescent Creek have both developed and appreciate. Check out the maternal side of the bulls being used and you will find superior cows as the backbone of the breeding program.

Management practices include using home grown feed stuffs as much as possible, together with great pasture management and animal husbandry practices like true stockmen. CAPP recognized performance testing, together with CUP carcass evaluation and semen testing; all have become regular practices.

Regular informative visits to Crescent Creek have OBI aware and current with much of the program and can assist you with sale day selections if you require.

2 serious considerations for buying Crescent Creek Genetics are:
#1 The many success stories that customers have enjoyed and
#2 The after sale service, running parallel to a most successful seedstock breeder.
Congratulations on all fronts.

If any of the sale staff or OBI can be of help, please do not hesitate to call. Check out this unique program and we will see you sale day.

Rob Holowaychuk, OBI

All bulls have been ultrasounded through CUP. Ultrasound data will be available approximately 2 weeks before the sale ... check our website or give us a call. Bulls and females have been subjected to a vaccination program utilizing Express 5 modified live vaccine and they will have their pre-breeding shot as well as a black leg booster.

View the catalogue online at www.cattlemanagement.ca
The cattle industry is evolving, more than ever before, toward marketing cattle based on carcass merit. Evidence of this trend is seen with the ever-increasing number of packing plants adopting value-based marketing. The traditional method in North America of selling cattle based on live weight is rapidly changing to where payment and premiums are made based on carcass weight and quality. Due to high input costs, we are no longer able to compete on the international trade market for commodity beef; therefore it is in our best interest to produce the high quality beef demanded by our consumers. This change has resulted in the adoption of technology to evaluate live animal carcasses. Ultrasound enables producers to know the carcass merit of their cattle and subsequently, assist them in developing an elite herd where progeny can be marketed for top dollar.

Ultrasound has proven extremely accurate in assessing carcass merit and has been tested repeatedly over the last 50 years. Today ultrasound measurements must be collected by Ultrasound Guidelines Council (UGC) certified field technicians and analyzed by a certified lab and lab technician. Despite small discrepancies in technician and lab biases, ultrasound measurements have proven to be a reliable and accurate method of developing carcass merit EPDs. Because carcass traits are moderately to highly heritable, improvements in herd genetics can be seen in a relatively short period of time. Ultrasound provides producers with one more tool by which they can select traits in order to produce top quality animals.

Percent Intramuscular Fat (%IMF) or Marbling
Due to the grid premiums and incentives to raise AAA (Choice) and Prime cattle, marbling may be the most important economic measurement collected with ultrasound. Ultrasound measures the %IMF in cattle and reports this value as a numerical indicator of marbling. For example, just like birth weight is an indicator of calving ease, %IMF is an indicator of marbling.

It is important to know what values are being represented in the sale catalogs when comparing data and to remember that the value of most concern is always the EPD value.

Steers and heifers will usually have slightly higher marbling values than bulls of the same age and genetics.

Ribeye Area (REA) and Fat Depth (Rib Fat and Rump Fat)
The ribeye is one of the largest muscles in the body; therefore REA gives an indication of overall carcass muscling. However, REA is influenced by body weight, which often results in the largest ribeye belonging to the heaviest animal. It is important when comparing REAs within contemporary groups to compare data that has been adjusted for age and/or weight.

Recently, a study by John Brethour, of KSU, revealed a significant association between carcass ribeye area and average daily gain just prior to slaughter. Meaning that animals with larger REAs had better gains later in the feeding period. While having a large ribeye is desirable, there are some drawbacks when REA becomes too large. Extremely large ribeyes can lead to a reduction in marbling.

Fat Depth is an important factor that greatly influences lean meat yield. Backfat (Rib Fat) will reduce yield many times what REA will increase yield. Secondly, fat measurements give an indication of an animals fleshing ability. Progeny from cattle with genetics for no fat may finish too slowly, while progeny from cattle with too much fat will incur yield discounts before a desirable carcass is obtained. Furthermore, body condition scores (fat depth) in females are related to their ability to reach puberty early, produce milk, and rebreed to maintain shorter calving intervals. Similarly, bulls carrying too much fat may have reduced fertility. The key to breeding for Fat Depth is moderation.

Optimizing Your Investment
1) In order to qualify for genetic evaluations (EPDs) cattle must be scanned at the appropriate time. Each association has slight differences, but averages are bulls 320 – 440 days and heifers 320 – 460 days. Heifers are often done later to allow genetic differences to show because they are usually not fed as hard as bulls.
2) It is important to scan all cattle in a contemporary group. This provides sufficient information for evaluation and comparison purposes within your herd.
3) The value in scanning replacement heifers has often been overlooked. Having carcass merit data on all females entering your herd will greatly improve the value and accuracy of their progeny records. In addition it will allow you to make informed decisions about the carcass merit of females making up your future herd.
4) Upon investing money into ultrasounding your cattle, it is essential to promote this information to your customers and potential customers. With premiums being paid for high quality carcasses, more and more commercial producers are asking for scan data. The days of selling commodity beef are limited therefore; it is in your interest to create and market an elite herd of high quality carcass cattle.

Common Misconceptions
There is a common misconception that marbling can be fed into all animals. Although feeding an animal for extended periods of time does increase marbling, the genetics must be there in order for value-based marbling to be pronounced in cattle ready for slaughter without risking over-fat.

Why are my REAs smaller this year than last year, is this a collection or analysis error? While I am not dismissing the occasional technician error, it is important to remember that although carcass merits are determined by genetics, environmental factors do contribute to the phenotype expressed by each animal. Feed type and quality, weather, and sickness are some of the environmental factors that can influence phenotypes expressed from year to year. This is one more reason why comparisons can only be made by EPDs or indexes within a contemporary group.

---

We once again we start our offering with a strong set of Emblazon bulls. We feel these Emblazon sons are what most seedstock producers would like to send out to the industry. Bulls full of muscle and meat on an excellent set of feet and legs. They also have dispositions you can really appreciate. These are bulls that will give you extra pounds at both weaning and 365 day weights. 58T has done very well here. He seems to cross with any of our sire lines to produce a very uniform set of bulls. His first set of females are making excellent mothers this year at Crescent Creek. They have beautiful udder shape and attachment and excellent mothering instincts. They are a powerful set of bulls and females.

---

A real herd bull prospect here! His dam Duchess 51M produces the great ones. She has produced herd bulls for Beverly Hills Angus & Windy Willows Farms. This bull is full of character, free moving with large testicles and a herd bull presence. Be sure to check him out.

Powerful pretty well sums this great herd bull prospect up. Again from a never miss female with a great pedigree. 51X will be easy to find come April 2. He will be right next to the sale barn. One of my favorites, 800 lb weaning weights come from this kind of fellow. Who knows what these kind of calves will be worth down the road “long term investment”.

Retaining 1/3 interest.
The Bronyx Emblazon 58T sons are very easy to look at. Full of muscle, clean fronted and with crests. When you watch them walk they are free moving and correct. An excellent set of bulls.

- Fat: +0.000
- Carcass Wt: +6

An excellent set of 58T twin sons - out of one of the most prolific Quantum daughters here. They have lots of muscle and character. 17P produced the excellent herd bull purchased by Allan & Wanda Henderson, Gainsborough from the 2010 sale.
If you are looking for a new herd bull I believe this set of bulls could make it very easy. 07T was first used on heifers 2 seasons ago. After seeing the results we quickly turned him out with the mature cows. These fellows are very muscular yet have ample capacity. His females are gems. 07T represents one of the most proven cow families here and with Rosebud 115F appearing you know the results will be predictable. 07T is co-owned with John Orr at Elkhorn, MB. When John purchased 07T he said he was one of the best footed bulls he had ever seen. 8 sons sell.
Another powerful 07T son. As you study these Emblazon sons you can see it would be very easy to assemble a sire group that would produce steers that can top the market.

The Emblazon 07T sons are no different than the 58T sons. Lots of muscle, acceptable birth weight with that herd bull look. 130X is a real herd bull prospect. His dam has produced many bulls from our sale including herdsires for David Siever, Hodgeville and Arran Ivey, Ituna.

Another powerful 07T son. As you study these Emblazon sons you can see it would be very easy to assemble a sire group that would produce steers that can top the market.

Retaining 1/3 full interest.

#1 bull on the home test. An exciting March born Emblazon son with an excellent hair coat. This bull will create as much interest as perhaps any bull in the sale. He was a standout from birth forward. His feet and legs are flawless as attributed to the 07T sire. This would be an exceptional bull for those who would like to show a bull with a little different twist to create a lot of excitement.

Retaining 1/3 full interest.
